

Microsoft Outlook Interface

VeDMS is tightly coupled with Microsoft Outlook for easy accessibility in managing documents without logging into the application separately.

Authentication

Single Sign-on with Windows domain account in Active Directory and password authentication using LDAP support and VeDMS user accounts.

Office Correspondence

VeDMS has an integral office correspondence module to manage all inward and outward messages within the organization.

Administration and Configuration Features

VeDMS is highly flexible and full fledged application which allows administrators to configure various controls, search options, themes, labels etc. as per the user requirement.

Alerts/Notifications

VeDMS has an inbuilt component to alert/remind various activities such as List of Tools due for calibration, important events, schedules, responses, approvals etc...

Security

Highly robust security built into the system to ensure appropriate document access according to the privileges set at user and document level. VeDMS enforces SSL secure communication and controls documents and metadata through access control lists and privileges.

VeDMS

Secure Document Management System

VARSun as a Company...

Varsun eTechnologies Pvt. Ltd. was established in 2003 by a group of professionals having vast industrial experience. Varsun has world-class facilities at both of its development centers in Hyderabad, India and Los Angeles, USA. Varsun is a rapidly growing Information Technology company that provides Software Development, Consulting and IT-enabled services to diverse clientele.

CMMI Varsun is a CMMI ML3 Company certified by Carnegie Mellon's SEI and ISO 9001:2008 certified by ANSI-ASQ National Accreditation Board.

Varsun is the certified partner of Microsoft for developing solutions using .Net technologies and authorized partner for Oracle to provide Training and Implementation of PeopleSoft ERP.

Services

Through the utilization of improved processes and leading edge technologies, Varsun has helped several organizations create a competitive advantage while reducing the costs.

Varsun has a proven track record of successfully completing the implementations as per the agreed timelines in the areas of Application development, ERP services, QA services and Product installations. Varsun strictly follows TCoE model to ensure minimal/no errors post implementation.

Varsun's services help organizations in automating and enhancing the business processes by using latest technologies and tools. Our unique methodology, Rapid Unified Process(RUP), uses best practices of Iterative Development, Requirements management, Component Architecture, Change Management, Quality Assessments etc.

Management of Data Services ensures that the information is integrated, comprehensive, uniform, analyzable and accessible at all times. These services include document storage, easy accessibility tools, audit trail, data validation, security, automatic data transfer, analysis of enterprise data and availability of the data & document on demand. We also recommend tools that secure financial and technical information; charts, drawings, images, documents, reports, etc.

Varsun provides ERP Corporate Training and Professional Consulting Services to various organizations in India and US.

VeDMS

Secure Document Management System

Capture Your Documents

User-friendly capturing of documents/information from various sources; electronic documents such as Word files or PDFs from the repository, Image documents directly from the Scanner, Emails/attachments through Outlook integration, documents received through facsimile.

Search and Retrieval

Powerful search tools to retrieve the required document / information in quick time using Basic, Advanced and Content Search options.

VeDMS in brief...

Managing documents and information is a major challenge, especially given the exploding amounts of content that organizations generate today. The failure to capture, retain, track, share, and destroy sensitive information can have serious repercussions, leading to missed business opportunities, poorly implemented organizational strategies, and complicated compliance issues.

VeDMS enables document capture, retrieval, and management simple. Our Web-based application provides what matters most for an organization: Access, Speed, and Security of valuable documents. That's how you get Right Information at Right Place in Right Time.

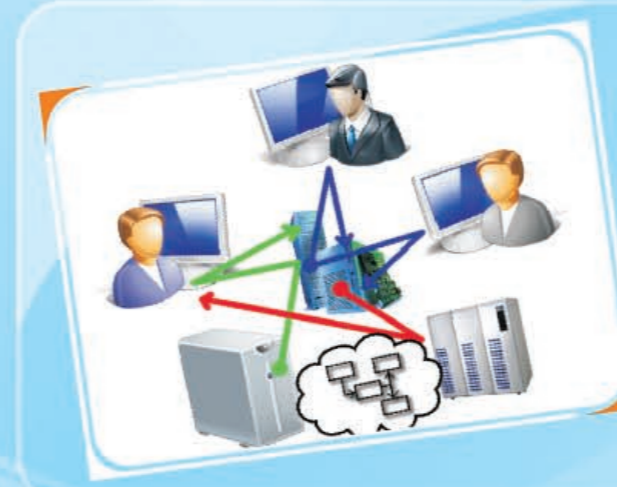

Manage Your Documents

Powerful content repository organized in a familiar folder tree structure with a flexible administration and Repository management tools.

Workflow

VeDMS Workflow engine enables organizations to automate standard and collaborative business processes, such as approvals or routing based on their predefined rules. Building a workflow is as easy as selecting and configuring workflow activities: pre-built, configurable processes designed to accomplish a specific task.

VeDMS Workflow is a highly flexible and powerful tool using which various workflows can be designed with ease. Authorized users can modify, review, approve, reject, forward, delegate or escalate the document by enabling the workflow. Subsequently the current status of the document can be viewed by the users.

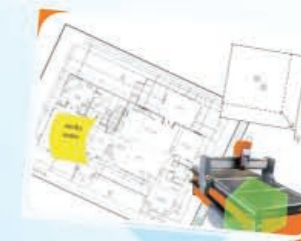

ERP Connectors

VeDMS can be integrated with any ERP's such as SAP, Oracle, IFS etc.. or any other third party applications.

Image Annotation

VeDMS is designed to place annotations using various options such as sticky notes, redaction, hotspot etc.
